COMPANY HISTORY

- ◎ **Mar. 2018**
Appliance&electronics World Expo Fair
- ◎ **2016**
Set up complexed coating & laminating machine(Coater #2)
- ◎ **2015**
Set up total multi cleaning machine
- ◎ **2014**
Launching special hair-line pattern(DI, TH, CH, XH)
- ◎ **2012**
Set up 2nd factory and named as Headquarter (16, Jukyeop san ro 95beon-gil Soheul-eup, Pocheon-si, Gyeonggi-do, Korea)
- ◎ **2007**
Start to export to Europe Market
- ◎ **2004**
Set up 1st hair-line machine • Launching china sales office
- ◎ **2003**
Establish

Hair-line

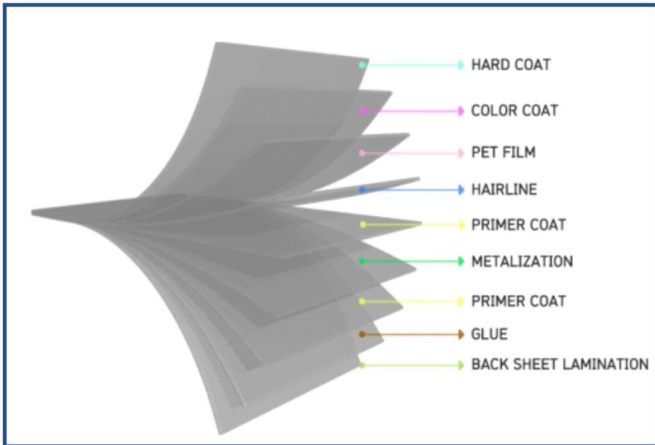

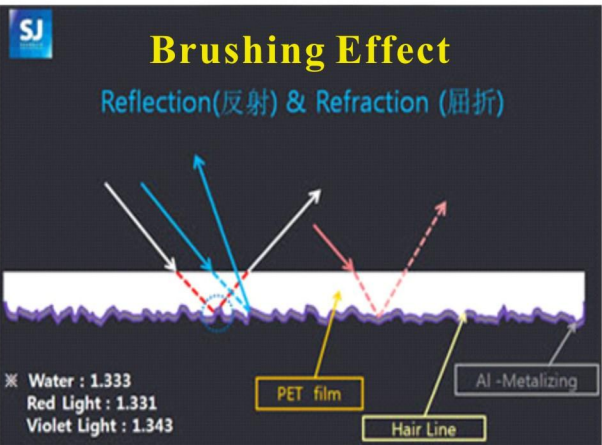

SJ's hair-line product is made by only physical brushing & scratching method instead of printing & transferring method. Our specialized hairline patterning mechanism can express high quality appearance according to the combination & harmony between bright and dark light angle.

In addition, our hair-line pattern can give more valuable appearance mixed with printing, metallization and laminating with another film. The main point of hair-line film is that the pattern effect can be changed by the reflecting angle of the light. It can show distinguished surface feeling compare to the printed pattern.

It can also be harmonized with metallization and can substitute the real metal product.

Therefore our hair-line product can replace real aluminium and real stainless steel product and express various different look and can bring the product diversification.

SJ invented new mechanism to realize various pattern by brushing method in the world's first such like wooden, lattice, flower, geometry, high-density and transversely, cross angle('X'pattern). Various brushing pattern can be applied to the field of steel plate, MDF, veneer board, Aluminium foil, Plastic profile, ABS, etc....

PRODUCTION PATTERN

Product material ✓ PET ✓ OPP ✓ PC ✓ PVC ✓ ABS
